

Practice Interpreting Data

In addition to drawing graphs, it is also important that you be able to interpret data that is represented in graph form. The following examples are provided to help you develop the ability to read information shown on a graph.

1. Identify the graph that matches each of the following stories:

- I had just left home when I realized I had forgotten my books so I went back to pick them up.
- Things went fine until I had a flat tire. I fixed it and then continued
- I started out calmly, but sped up when I realized I was going to be late.

2. The pie graph represents the typical day of a teenager. Answer these questions.

- What percent of the day is spent watching TV?
- How many hours are spent sleeping?
- What activity takes up the least amount of time?
- What activity takes up a quarter of the day?
- What two activities take up 50% of the day?
- What two activities take up 25% of the day?
